Passion for quality is our identity

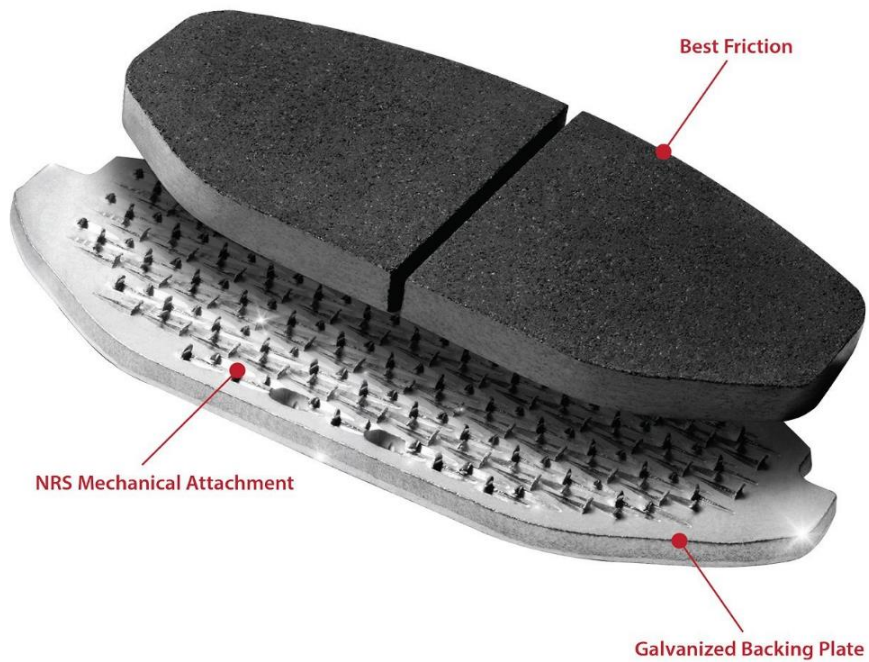

Brake Pads

Life is all about putting in great performances whatever you're doing. With the help of KAIZEN brake pads you can deliver great performances for your customer. KAIZEN Aftermarket brake pads are the best in the business, offering high quality, reliable performance that you can trust whenever you need it. We're the market-leading specialists when it comes to braking systems, so take advantage of our experience. We'll make sure you're offering the best service, and that your customers' vehicle safety systems perform to their best on the road every time.

We understand the importance of friction material in front and rear brake pads. Making the friction material compound in-house allows us to find the perfect combination of raw materials from rubber to graphite, generating the safest brake pad performance across all conditions.

Our scorching techniques heat the pads to 600-700oC, which helps to reduce bedding-in time and initial fading. Automatic moulding presses allow us to use deep moulding technology, which produces a more consistent density and porosity. This will give drivers that leave the garage with our replacement brake pads fitted to their vehicles more comfortable journeys because it minimises the amount of judder and noise.

Every element of our aftermarket brake pads is tested multiple times, including those crucial back plates, which carry the friction material. To prevent rust from developing on the back plate we use a powder coating, and the specialist design from KAIZEN helps the brake pad to resist high shear strengths as well as hot temperatures.

With all the advanced manufacturing and testing that we do at KAIZEN, we can guarantee our parts, but our service is about so much more than that. We'll give you all the fitting accessories required to achieve a fast fit, and our 36-month, 31,068-mile (50,000km) warranty will add value to your business, as well as bringing peace of mind to your customers.
